PROFESSIONAL SUMMARY

Driven by a *passion for complex problems*, I am passionate about *technology*. *Programming* is the area where I can express my *creativity* and I have worked as a freelancer by developing desktop and mobile applications for small companies and individuals. *Coding* is also an hobby and interest of mine that keeps my mind focused, whilst utilising meticulous skills and improves my logical and critical thinking skills.

Web Development was an area where I lacked knowledge of. However, by joining the *JustIT* bootcamp, a government-funded course, I could speed up my learning journey. I do now have my own website available at *www.salvatoreamaddio.co.uk* which has been built entirely by me with the skills acquired in the Web Developer's course.

With an *authentic personality*, I am purposeful, *creative*, and happy to address challenges, for the purpose of *learning and proving myself* within the working-field. I am currently looking for an opportunity to gain further experience *and expand* my existing tech-skills and knowledge.

Finally, I have been in London since 2016 and I worked in retail whilst graduating in International Business Management. I worked my way up from Sale Assistant to Assistant Store Manager within Poundland showing a great ability in terms of *time–management* and *meeting deadlines*.

WORK HISTORY AND PROJECTS
